### 2<sup>nd</sup> Net Zero-Energy Buildings Conference

New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

### NZEB – an interactive building?

Daniel Aelenei, Universidade Nova de Lisboa, Portugal Laura Aelenei, National Laboratory of Energy and Geology, Lisboa, Portugal

## **Overview**

Framework

Buildings within Grids

**Envelope Solutions** 

Conclusions

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

## Framework

Implementation timeline of EPBD requirements in terms of nZEB

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

# **Buildings within Grids**

#### **Interactive Buildings**

- Building design
- Envelope solutions
- Energy management
- User interaction

#### **Urban networks**

- Movement between buildings\*
- Energy networks
- Waste\*
- Open space\* (street lighting, urban forestry, interaction between citizen and urban...)
- \* McKInsey & Company

- 2<sup>nd</sup> Net Zero-Energy Buildings Conference New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction
- Universidade Nova de Lisboa September 29, 2015

# **Envelope Solutions**

#### Building envelope design and materials determine

- Energy use (heating and cooling)
- Amount of lighting
- Air sealing
- Embodied energy
- Sound insulation

The interface between the interior of the building and the outdoor environment plays an important role in maintaining a comfortable indoor environment relative to the outside environment!

# Q: Are current standards and practices capable of providing the needs in terms of zero energy and low carbon challenges?

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

# **Envelope Solutions – what type?**

reduce building energy demand

Building envelopes are subjected to dynamic environmental conditions!

Adaptive or dynamic facades may offer buildings the flexibility needed and they have been already identified as a key envelope requirement for (near) zero-energy buildings!

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

# COST Action TU1403 – Adaptive Facades Network

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

### **COST Action TU1403 – Adaptive Facades Network**

#### **Objectives**

Harmonize, share and disseminate technological knowledge on adaptive facades between industry and academia and foster their collaboration;

Foster the development of novel concepts, technologies and new combinations of existing technologies for adaptive facades, as well as the development of new knowledge such as effective evaluation tools / design methods for adaptive facades.

Web page: http://tu1403.eu/

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

### **Adaptive Facades Challenges**

Developing climate adapted and cost effective concepts based on the interface between buildings and their surrounding site, taking into account climate, integrating RES challenges and user comfort requirements, for new and existing building envelopes is an easy task...

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

### What examples are out there?

Hybrid façade integrating functional elements

Dr. Laura Aelenei, LNEG laura.aelenei@lneg.pt

Features integrated active solar technologies. With PV modules, air cavity, PCM movable battery and fans.

By ventilating the air gap behind the PV and by recovering the heat released in the conversion process it improves and stabilizes (PCM) the indoor thermal comfort.

Nine operating modes that will vary the open/closed status of gates and drawers and on/off status of the fans

### TransFlexTeg

Large area transparent thin film thermoelectric devices for smart window and flexible application. Objective: to develop novel large area distributed sensor network integrating transparent thin film thermoelectric devices and sensors for multifunctional smart windows and flexible high impact volume applications (smart window able to measure air quality and environmental parameters such as temperature, sun radiation and humidity).

- large area high performance transparent thermoelectric thin films deposited on flexible substrates for thermal energy harvesting;
- low cost high throughput thin film thermal sensors for thermal mapping and gesture sensing;
- flexible smart windows and walls with energy harvesting, environmental sensing and wireless communication functionalities.

Isabel Ferreira imf@fct.unl.pt www.TransFlexTeg.eu

### Adaptive glass facades under wind loadings

Smart glass façade based on a bow-string truss solution which is able to continuously adapt its shape to compensate the wind dynamic displacements

Filipe Santos – FCT/UNL fpas@fct.unl.pt

Generation of artificial wind series with promising response

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

#### **Other Projects**

BIQ house', Hamburg, Germany. (Splitterwerk, Arup & Colt international). Features integrated microalgae which are used as bio-reactors inside panels.

The Oval Offices in Cologne (arch. Sauerbruch and Hutton, 2010). Features vertical axis glazed sun louvers for light regulation (photo by M. Brzezicki).

Goal / purpose	Responsive Aunction	Operation	Technologies (materials & systems)	Response time	Spatial scale	Visibility	Degree of adaptability
Thermal comfort	Prevent, Reject, Admit or	Intrinsic	Shading	Seconds	Building	No	On-off
	Modulate (Store, Distribute) splar	Extrasic	Insulation	Minutes	Facade	Low.	Gradual
	gains, and conductive,		Switchable glazing	Hours	element	High	
	convective and long-wave radiant		PCM	Day-night	Wall		
	heat fax		Entret Bar	Seesons	Fenestration		
Indoor air quality	Controlled peresity for		BIEL ALCONY	Years	Roof		
	exchange and filtering of <u>subside</u>		thermal systems	Decades	Whole building		
Visual performance	BE Depart Depart	-	Shape memory				
	Admit or Redirect		Biola				
(Illuminance, glare, view)	visible light		Paçade openings				
Acoustic quality	Prevent, Reject,	51	Kinetic systems				
	Admit or Redirect sound pressure		Rediant glacing				
Energy generation	Collect and convert wind <u>energy</u> and <u>gunlight</u> into electricity and thermal energy						
Personal control	User interaction and adaptation to individual needs						

#### Basis for systematic characterization of adaptive facades

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

### **Do NZEB need adaptive/interactive façades?**

### Future (adaptive) façades features:

- Reliable;
- Flexible: be able to handle bi-directional energy flows;
- Energy efficient;
- Adaptive: reduce peak loads by matching supply and demand;
- Sustainable;
- Cost efficient

2<sup>nd</sup> Net Zero-Energy Buildings Conference - New Challenges for NZEB in Smart Cities - Energy Flexibility and Building to Grid Interaction

Adaptive façades may be simply defined as "the tools used to provide the proper comfort into a building" –

(Winfried Heusler / Schüco – Delft Cost TU1403 Meeting)

# Thank you for your attention!
